

Behind the Scenes

Building RecList in the open with students, researchers and partners.

Jacopo Tagliabue, Ciro Greco, Federico Bianchi

The 4 **pillars** of building **RecList**, an open source package to help scaling behavioral testing in Recommender Systems.

Industry Drives the Process

Driven by industry concerns: we imagined RecList to help with the deployment of dozens of ML sys in the wild.

Academic Collaborations to Design a Solution

Researchers place the problem in the context of recent literature, highlight open challenges, iterate on the original proposal.

Opening up to the Community: Better Testing, Diverse Ideas

Collaborators answer a “call for builders”, helping us testing RecList and then extending its functionalities.

Gathering Feedback and Interacting with The Community

Other institutions start discussing the package and provide a new perspective on use cases and functionalities.
